REMOTE CONTROL ROLLER GARAGE DOORS |

Installing a garage door can significantly impact the appearance of your entire property, making the purchase of a garage door a highly important investment. Rollwright understand this and this is why we have developed and offer a vast range of high-quality made-to-measure electric roller garage doors. Our garage doors open vertically to enable you to park as close to the garage door as you like and free up additional space on the driveway itself.

Benefits include:

High Security

Remote Control Operation

Safety

Space Saving

Heat & Sound Insulation

Range of Colours

Our bespoke roller garage doors are made to measure, which provide multiple different sets of characteristics depending on your requirements and your personal preferences.

Rollwright Classic

Traditional Roller Garage Door

Our traditional aluminium insulated roller garage door offering ease of use, more drive space and more in-garage space.

Rollwright Midi

Slim-line Roller Garage Doors

A variant of our *Rollwright Classic*, this roller garage door system offers the same benefits but is more compact in design, ideal if your garage has limited head-room.

BENEFITS OF A ROLLER DOOR

HIGH SECURITY

Rollwright's doors lock automatically upon closure, which significantly reduces the risk of burglary or any form of intrusion.

There are no external handles or locks to tamper with, and the door is held firmly closed by the powerful motor and sits within reinforced tracks.

Our remote handsets are anti-clone which increases the security of your home.

SPACE SAVING

Older garage doors are quite large and thus take up lots of space. Our doors on the other hand are extremely efficient in this regard as they are able to withdraw and roll up into a small space, and come complete with aluminium safety housing. This allows you to optimise the space you use within your garage and reduces clutter. Guide channels ought to be fitted in the surrounding areas in order to optimise the opening widths, and depending on model and application these can range from 70mm to 120mm.

Rollwright garage doors use a 77mm aluminum foam filled profile rolling into a 300mm housing with a 45-degree bevel. The Rollwright midi option is more specifically tailored for garages with limited space in the entrance, and has a slimmer profile at 55mm, enabling the roll to be even tighter, requiring a 205mm housing.

Our doors roll up into a neat box, and they do not require any internal overhead track work. Our doors are also made to measure for a perfect fit, we do not use timber framework to pack out and make the doors fit.

REMOTE CONTROL ELECTRIC OPERATION

All of our doors feature industry-leading technology and come with manual override which can be used in the event of a power failure.

All that is required is to press the button and the door will slide open, and this can be done from anywhere within 50 metres, which means that it will no longer be necessary to move heavy doors.

The control panel comes with an array of keys to accompany the remote key fobs, and there are a vast selection of other product choices which can be discussed in your no obligation survey.

HEAT & SOUND INSULATION

We use polyurethane foam to heat and soundproof our roller profiles, there are integral brush seals within the guide sections and there is a rubber seal attachment within the strengthened bottom rail.

SAFETY SYSTEMS

All of our doors come with exceptional levels of health and safety as standard, and our remote control unit comes with a safety sensor to ensure that these standards are upheld across all of our products. Rollwright doors are responsibly manufactured and they exceed all current legislation.

QUALITY & PEACE OF MIND

We have been making and installing doors across the country for nearly 3 decades, and our highly skilled and experienced workforce ensure that our products are installed efficiently and of a high standard at all times.

We don't outsource any of our work and we never use subcontractors.

Our doors come with an extensive and comprehensive warranty to provide you with optimum peace of mind that you have made the right decision in coming to us. Our doors are fully safe to operate and our reputation is widespread, meaning that our customers are always fully satisfied with the service we provide as a family business with full after-service care.

RANGE OF COLOURS |

We provide doors with a unique blend of modern and more traditional features to produce a slick and professional appearance. Along with this we also offer a large assortment of colours for you to select from, all of which look extremely appealing on our products.

FRAMEWORK (Tracks & Top-box)

*More available on request

PROFILES

*More available on request including duck egg blue, moss green, light blue, chartwell green, graphite, maroon, silver

WOOD EFFECTS

*More available on request

We have a range of 20 colours and 6 wood effect (laminated) colours, with framework and top-box available in white, brown, black or grey. They are also fully customisable, enabling you to mix and match door colours and top-box to contrast or compliment your property.

NOTE: Our woodgrain laminate finishes may incur an additional charge (golden oak, irish oak, walnut and rosewood).

Please also be wary that special finishes only appear on one side, meaning that woodgrain doors would have to be specifically ordered if this was requested.

The colours on display here are not precise replicas of what will appear on the doors due to printing restrictions. If you'd like to get a better idea of what these colours would look like on the product, please request a sample.

OPTIONAL EXTRAS |

- Choice of handsets
- Bespoke colours
- Wireless digital keypad
- Alarm module
- Wireless wall switch
- External low level manual override
- Battery backup
- Smartphone operation
- Extended warranty

INSTALLATION OPTIONS |

Rollwright's garage doors are versatile and can be fitted in a myriad of different ways.

INTERNAL FACEFIX

The optimal installation location is on the internal face of the garage. In this instance, the guides and box enclosure are fixed to brickwork around the door, which is an efficient use of space as well as being highly secure.

REVEAL FIX

In some situations the installation must take place in the opening of the garage itself. This is ideal if garage space is important to the consumer, but good reveal headroom is required for this to work.

EXTERNAL FACEFIX

This is a good option if there is a restriction with internal space above the opening, and it also means that the installation takes place in front of the outside of the garage.

Rollwright garage doors use market leading motors and controls using the following brands
